

GENERIC drugs prescribed online and shipped directly to your doorstep! No Prior Prescription Necessary!

Eliminate SPAM, Viruses & Malware  
**Before** they enter your network.

**The SPAM Zapper is a Multi Layered Tool which is developed for your Defense in Depth Strategy.**

The SPAM Zapper™ is a Multi Layered SPAM Filter, developed to limit the Spam and permit valid E-mail. Our work with Law Enforcement permits us to identify new Spam techniques, as well as to assist as them in identifying the sources.

Originally developed to limit the Spam for customers of ISPs, we have filtered millions of messages on-line for Individuals and businesses as well.

Spam, Viruses, Malware, Trojans, Internet Worms, SpyWare ... we've detected and eliminated the threats which our customers have faced, and made E-mail a tool again, instead of another Security Threat.

Filtering these unwanted messages from your Email can be one more component to your Company's Defense in Depth Security strategy. By reducing your company's risk, we can eliminate the threat **Before** it enters your Network. By keeping them out of your network, we have effectively minimized your Network traffic,

and we can Graphically depict the Spam & Virus Senders, distributors of unwanted messages, as well the top Email Senders and Receivers.

Used in conjunction with the System Hardening and Attack Detection Tools, our Mail Servers have endured all of the Internet Storms without having to be taken off-line. Imagine keeping your Mail Servers on-line while your competitors have pulled the plug.

*The Spam Zapper can assist your organization in meeting Gramm Leach Bliley, Sarbanes Oxley and HIPAA compliance requirements. If you are looking to protect your Company's information, and avoid the potential release of Private information, we can help you.*

**BENEFITS**

- Eliminates Spam from Open Proxies
- Authenticates Valid E-Mail Senders without user intervention
- Identifies Spam from well known Blacklists

- Utilizes whitelists to eliminate flagging known senders
- Identifies Spam, permitting you to move it (automatically) into a Spam Folder for review later.
- Identifies at least 99.99% of UCE (Spam)

**FEATURES**

- Completely Blocks Spam from Open Proxies
- Integrates with Multiple Virus Scanners
- Incorporates White and Black list for greater flexibility.
- Customizable recipes improves content scanning.
- Identifies Phisher Scams
- Flexible Filtering of Unsafe Attachments for Email.
- Eliminates new distribution methods for Viruses and Worms.
- Server based solution reduces the resources on everyone's PC.
